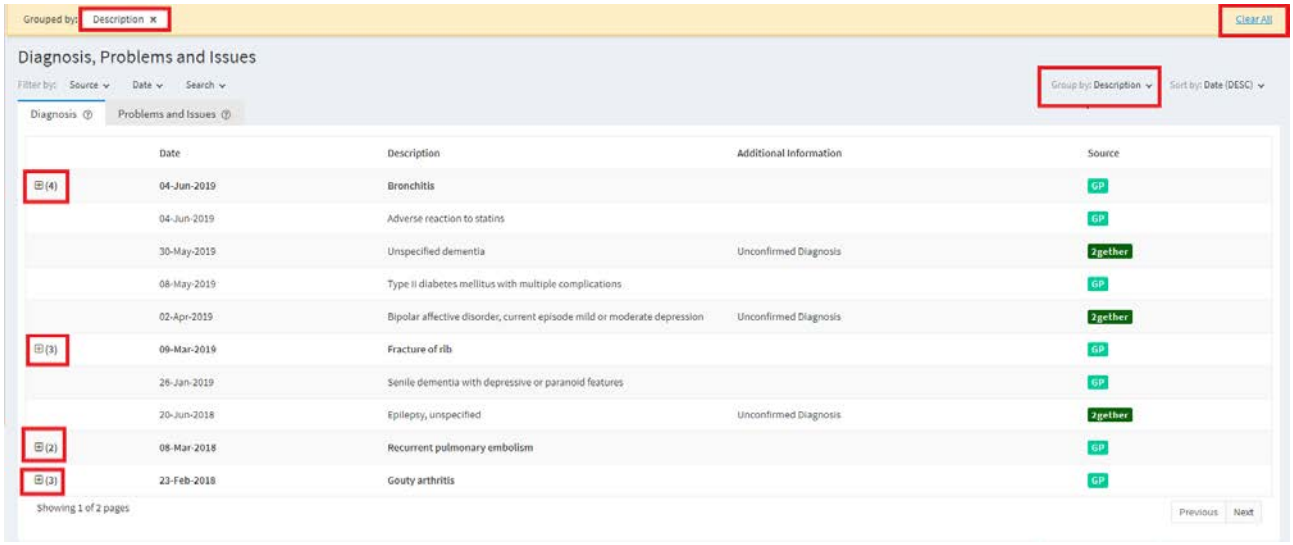
How to Group in JUYI

Within JUYI, data is blended from each provider and identified by the colour coded icons.

It is already possible to search, sort and filter the information within the detailed views.

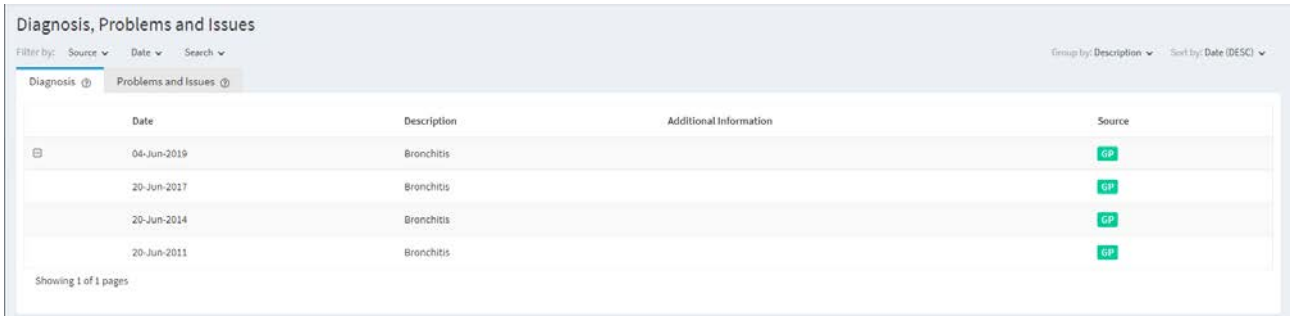
Grouping

Now you can also group data by clicking 'Group by:' on the right hand side of the screen and selecting the heading to group by when in a detailed view.



This will fold up all repeated entries together.

⊞(4) **The number denotes how many entries are included, click on the + to see the detail.**



Click the ⊟ to return to the detailed view.

To remove the grouping, click 'Clear all' or the 'x' on the heading within the yellow banner.

Note: All sorting applied is removed when navigating away from the detailed view.

Support
